

WHY TREAT YOUR COOLING WATER SYSTEM?

CORROSION, SCALING, BIOFOULING

THREE MAIN CHALLENGES

There are three main challenges your cooling system can encounter when the water is not treated properly- metal corrosion, mineral scaling, and biological fouling. These three challenges can develop into costly issues which include, but are not limited to:

- **Diminished heat exchange capability.**
- **Overworked pumps.**
- **Increased consumption of electricity or fuel.**
- **Damage to your cooling system and related plumbing.**
- **Growth of harmful bacteria, such as legionella.**

BETTER WATER. BETTER SYSTEMS.

Not all cooling water is the same and therefore not all water treatment programs are the same. In general, numerous elements of a successful program work synergistically to maximize the efficiency and longevity of your systems. Some programs may call for pretreatment, such as softening or filtration, while others may be eligible for a non-liquid chemical system such as EVAPCO's Pulse~Pure. Cooling water chemical programs usually include scale/corrosion inhibitors, oxidizing biocides, and non-oxidizing biocides.

A CASE STUDY

PROBLEM: The California Bay Area is known for its tall buildings and architectural diversity. So, for a property management firm in Emeryville, maintaining the integrity of the buildings it manages meant having successful water treatment programs for its diverse portfolio. The firm was having routine attendance and communication issues with its water treatment provider. As a result, the firm fired its provider and decided to give Meras Water Solutions an opportunity to demonstrate what customer service really means.

The firm was having routine attendance and communication issues with its water treatment provider.

SOLUTION: Meras has been providing monthly service visits and timely service reports to ensure the right people have accurate and transparent information regarding every single treated water system. This firm now has a partnership based on trust and communication.

FREE SITE SURVEY

You may be wondering if your current program is still effective or you may simply want a second opinion on how your systems are operating. Just reach out and request a free water system survey.

ABOUT US:

Meras Water Solutions has been helping customers in California, Arizona, Nevada, and Oregon for over 15 years. We specialize in turn-key, customized water treatment programs and services. Solving problems and delivering customer satisfaction is what drives our team. Contact us and see for yourself.

Meras Water Solutions is pleased to announce our partnership with **EVAPCO®**, an international industry leader in the engineering and manufacturing of high-quality heat transfer products for the HVAC and Industrial Refrigeration market.

We are factory trained, offering exceptional service and quality products to provide on-going service for EVAPCO's water treatment systems.
